

4.Procedures and Triggers

The screenshot displays the MySQL Workbench interface. The top menu bar includes File, Edit, View, Query, Database, Server, Tools, Scripting, and Help. The left sidebar contains a Navigator pane with sections for MANAGEMENT (Server Status, Client Connections, Users and Privileges, Status and System Variables, Data Export, Data Import/Restore), INSTANCE (Startup / Shutdown, Server Logs, Options File), and PERFORMANCE (Dashboard, Performance Reports, Performance Schema Setup). Below the sidebar are tabs for Administration and Schemas, and a status bar indicating 'No object selected'.

The main workspace shows a SQL query in the 'SQL File 7' tab:

```
630 SHOW PROCEDURE STATUS
631 WHERE Db = 'BankDB';
632
633
634 -- *****
635 -- END
636 -- *****
```

The 'Result Grid' displays the following data:

Db	Name	Type	Definer	Modified	Created	Security_type	Comment	character_set_client	collation_connection	Database Collation
bankdb	GetAccountDetails	PROCEDURE	root@localhost	2026-08-11 13:49:36	2026-08-11 13:49:36	DEFINER		utf8mb4	utf8mb4_0900_ai_ci	utf8mb4_0900_ai_ci
bankdb	GetAllCustomers	PROCEDURE	root@localhost	2026-08-11 13:46:51	2026-08-11 13:46:51	DEFINER		utf8mb4	utf8mb4_0900_ai_ci	utf8mb4_0900_ai_ci

The 'Output' pane at the bottom shows the execution results of the query. The 'Action Output' tab is selected, displaying a list of actions and their messages:

#	Time	Action	Message	Duration / Fetch
68	20:42:30	SELECT * FROM first_table UNION SELECT * FROM second_table	2 row(s) returned	0.000 sec / 0.000 sec
69	20:42:53	SELECT name FROM first_table UNION SELECT name FROM second_table	2 row(s) returned	0.000 sec / 0.000 sec
70	20:43:12	SELECT * FROM first_table UNION ALL SELECT * FROM second_table	2 row(s) returned	0.000 sec / 0.000 sec
71	20:43:25	SELECT COUNT(*) FROM (SELECT * FROM first_table UNION ALL SELECT * FROM second_table) ...	1 row(s) returned	0.016 sec / 0.000 sec
72	20:44:39	SELECT first_table.name FROM first_table INNER JOIN second_table ON first_table.name = second_table.name ...	0 row(s) returned	0.000 sec / 0.000 sec
73	20:46:13	SELECT c.id, c.name, ci.address FROM class c INNER JOIN class_info ci ON c.id = ci.id LIMIT 0, 1000	9 row(s) returned	0.000 sec / 0.000 sec
74	20:46:36	SELECT c.id, c.name, CASE WHEN ci.address IS NULL THEN 'Address Missing' ...	13 row(s) returned	0.000 sec / 0.000 sec
75	21:18:44	SHOW PROCEDURE STATUS WHERE Db = 'BankDB'	2 row(s) returned	0.000 sec / 0.000 sec

On the right side of the interface, a message states: 'Automatic context help disabled. Use the toolbar manually get help for the current caret position or toggle automatic help.'
